

# FDR curves for naïve $r$ -mutation calling ( $r = 99$ to $r = 3$ ), using the 8 highest-diversity-index ( $r = 50$ ) target contigs $\geq 1$ Mbp

Number of called rare ( $r < 100$ )  $r$ -mutations per megabase

s1.ctg000002c FDR curves for 10 decoy contexts

Estimated FDR of called rare ( $r < 100$ )  $r$ -mutations (%),  
using a log<sub>10</sub> scale to highlight order-of-magnitude differences
